

Ref. No: 2067
Date: 22/09/25
Subject: local guidelines for managing pregnancies

REQUEST

Please provide a copy of your Trust's current local guideline(s), protocol(s) or policy documents relating to the management of suspected fetal macrosomia/large for gestational age.

If multiple documents exist, i.e, obstetric guidelines, maternity clinical protocols, induction of labour, etc.

RESPONSE

Response for Whiston: We do not have a specific guideline. However, I have attached the Guideline for Induction of labour (which is harmonised across both sites); the Guideline for antenatal and postnatal management of diabetes (not harmonised); and the Guideline for the Antepartum, Intrapartum and Postpartum Care of the Pregnant Obese / Bariatric Woman (not harmonised); which all discuss macrosomia.

Please see attached

Response for Ormskirk: Guideline attached for "Management of pregnancy with a large for gestational age fetus (Macrosomia)". Guidelines are currently being reviewed to become harmonised MWL guidelines. Therefore, the harmonised guideline for induction of labour also applies.
